A New Era of Data Visualization...

Product Overview

DGLux 2.0 is the next generation of Data Visualization, User Interaction and Application Design. A platform consisting of Cutting-edge Technology providing a sophisticated, fully configurable visualization layer which enables efficient and effective delivery of high-end, fully interactive data driven applications best suited for the target audience. The platform offers an advanced "What You See Is What You Get" authoring environment that is built on DGML Runtime (a cross-platform runtime interpreter utilizing Adobe's Flash Player).

As a thin client-side architecture, DGLux is a back-end system agnostic platform which supports mashing up KPIs from various data sources in a single user environment. A scalable architecture and open API allow for easy creation of new data adapters by 3rd party developers. These tools in your hands allow to easily build a fully functioning intelligent user interface to accurately model and interact with your building, business intelligence, and analytics systems.
