

Amazingly simple, Immediately useful

Product Overview

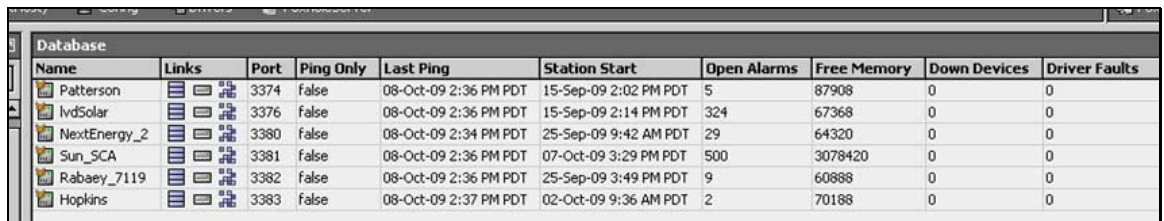

Foxhole[®] is all about opening communication between previously unreachable Niagara^{AX} installs and your server. Foxhole enables full integration of the Niagara Network where previously not possible. It integrates your Web Supervisor or engineering tool with JACEs they cannot “see”. This powerful tool enables the JACE to open a communication pipe to the Web Supervisor, without the need for firewall pinholes.

Foxhole is the one tool your Niagara^{AX} toolbox should not be without. It extends the communication and engineering capabilities of Niagara^{AX}.

Benefits and Features included with Foxhole:

- Remotely engineer Niagara installs from outside the firewall
 - Allows the use of less expensive labor to do the local install
 - Application engineers use Foxhole tunneling
 - A single dedicated Web Supervisor for all station connections
- Lower the cost of and enhance Service Business
 - Use of Foxhole tunneling for Virtual Service calls
 - Dedicated Web Supervisor for Service Business
 - Server-side “health” dashboard (below) – allowing for Proactive Service

Foxhole helps engineers and users save time and money by allowing interaction with their applications from remote locations.

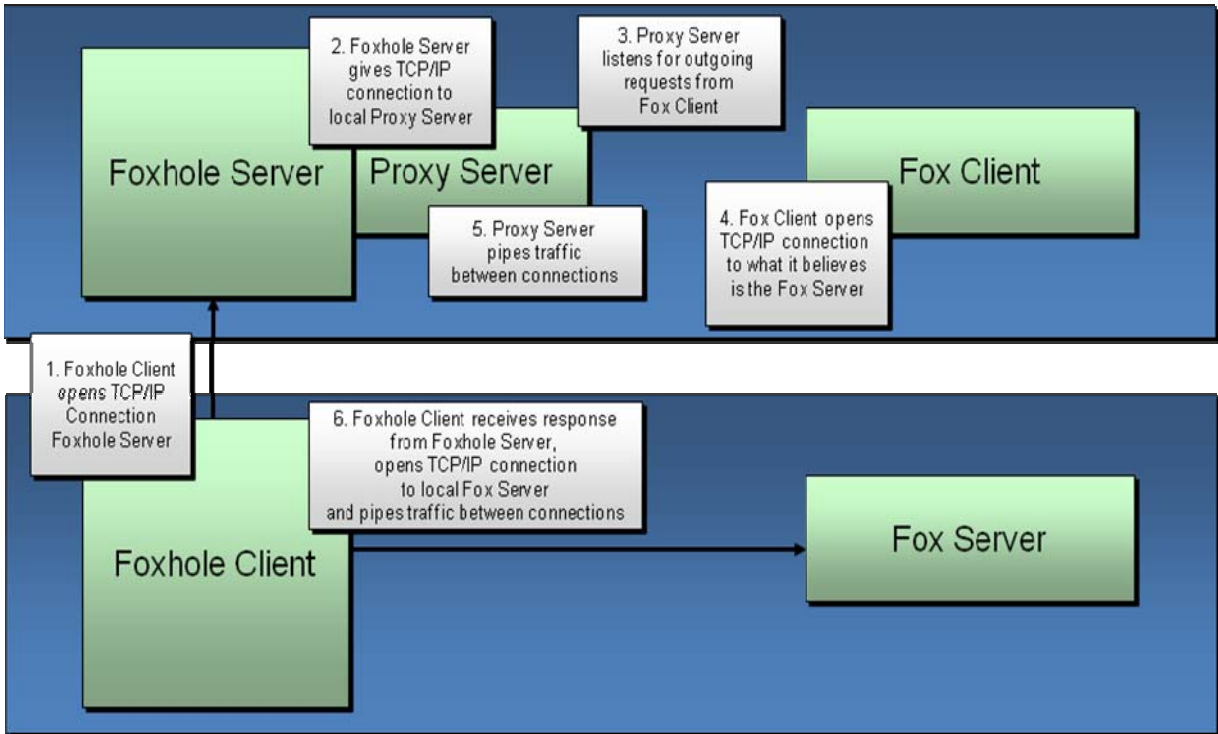

Name	Links	Port	Ping Only	Last Ping	Station Start	Open Alarms	Free Memory	Down Devices	Driver Faults

Rabaey_7119		3382	false	08-Oct-09 2:36 PM PDT	25-Sep-09 3:49 PM PDT	9	60888	0	0
Hopkins		3383	false	08-Oct-09 2:37 PM PDT	02-Oct-09 9:36 AM PDT	2	70188	0	0

- Ability to “Firewall” the JACE
 - Built in Firewall
 - Blocks IP communications to/from the Niagara Station
 - Only allows communications with the server
 - Access JACE by Foxhole tunneling through the Web Supervisor

Service organizations will find this a particularly useful tool!
